

Data structure and Programming II

TP03:File IO

- Objective:
 - To practice using FILE IO to store data in a permanent file
 - Apply C++ programming
- Individual work
- Submit to Moodle (do not zip)
 - A pdf report (cover, exercise and solution with screenshot)
 - Source codes

Deadline:
6 days

Write C++ programs to implement file IO.

1. Random 150 numbers then store in a file myluckynuber.txt. Finally display all data in the file on screen.

5 20 100 9 1001 98 76 1 44 333 210 28 29 10 11

An example of myluckynumber.txt

2. Write a program to store information of students in file. A student has name, age and email. Create a structure of student. Then create an array that can hold 100 students. Create a file data.txt that consists of 4 students below. Get the data from file and store to your array in the program. Finally, display all student info from the array on screen.

3. Write a program to store information of students in file. A student has id, name, age and email. Create a structure of student. Then create an array that can hold 100 students. Create a file data1.txt. Add more features by creating a menu program below. Then use can select any menu to perform that operation.

The menu is given as below:

- a. Display the data from file
- b. Add information of 3 more students to the array student
- c. Write all students info stored in the array to the file
- d. Search for a student from file based on an email address. Ask user to input an email, then display all info of that student. If not found, say "No Data".
- e. Update a student information on the file based on ID.
- f. Delete the data in the file. Ask you to confirm if s/he really wants to delete before deleting.
- g. Exit program

4. Write a program to create 1000 txt files in a folder located in folder D:/TP03-YourName. Each file should contain sequence numbers as follows:

- **File n. txt : store numbers from n to 10*n**
- Examples:
 - File1 = contains numbers 1 2 3 4 5 ... 10
 - File2 = contains numbers 2 3 4 5 ... 20
 -
 - File n = contains numbers n n+1 n+2 ... 10*n
